

MINI Family by AC Schnitzer.

AC[®]
SCHNITZER
beyond the standard.

MINI Family by AC Schnitzer: from elegant understatement to high performance athlete.

The very name MINI suggests successful retrodesign, elegant understatement and of course also sports handling. No other car provides driving pleasure in such a unique way as the MINI in all its model variants.

And AC Schnitzer would not be AC Schnitzer if it didn't refine this driving pleasure further, and use technology from motorsport to take it into new performance

zones. Subtly and with sophisticated understatement in the MINI Cooper. Or to the limits of the technically achievable in the MINI Cooper S and MINI Cooper S Clubman. The AC Schnitzer engineers and designers have implemented both philosophies in a select range of special accessories for the entire MINI family.

*Dynamism across the generations:
AC Schnitzer offers special accessories for
the entire MINI family with all models of
generations R55 and R56.*

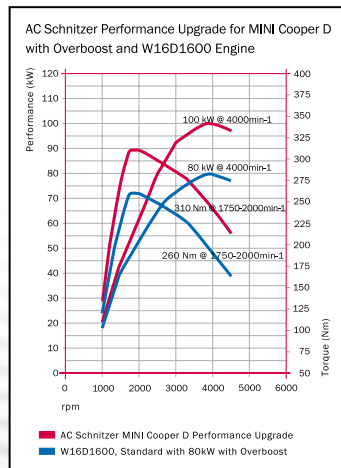

MINI Cooper by AC Schnitzer: the subtle side of sporting elegance.

Because body design is not just an aesthetic end in itself, the elegant front spoiler for the MINI Cooper also combines striking appearance with improved aerodynamics. And the performance upgrade for the diesel power plant in the MINI Cooper D catapults the standard performance up by almost a quarter to 136 HP. With virtually unchanged fuel consumption, this incredible

gain in driving pleasure is quite compatible with an ecological conscience. This athletic performance is complemented visually and acoustically by the AC Schnitzer sports rear silencer with chromed tailpipe, the Mi2 alloys in BiColor Finish and the AC Schnitzer suspension kit.

Harmonious overall concept: Performance upgrade, suspension components with lowering, rear silencer and alloy wheels are perfectly matched in the MINI Cooper by AC Schnitzer.

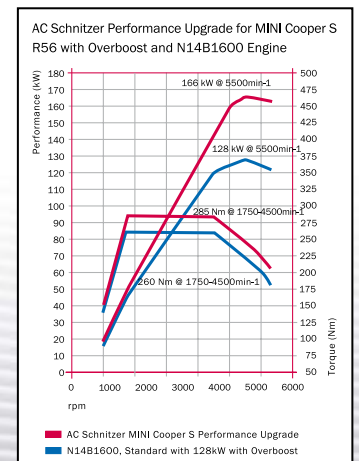

MINI Cooper S by AC Schnitzer: Top level athlete of the latest generation.

Evolution takes its course. With the R56 model series, AC Schnitzer engineering has also evolved. The aerodynamic components of front spoiler and rear skirt have gained contours, the racing suspension is far superior to the already excellent standard components, and the performance upgrade persuades the turbo engine to deliver an incredible 208 or even 226 HP - depending on variant - and a

torque of up to 285 Nm. The optional limited slip diff. adjustable to 75% transfers the drive power to the road perfectly in every situation. AC Schnitzer alloy wheels Mi2 in 18" and the twin sports rear silencer with chromed Racing tailpipe in central position are further key points in the training programme of this extreme athlete.

*Individuality by AC Schnitzer:
Perfectly illustrated by the alloy wheels Mi1 with polished rim and individually painted star (small picture) and Mi2 in Bicolor Finish (large picture).*

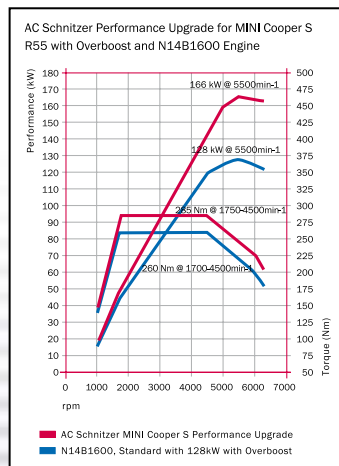

Cooper S Clubman by AC Schnitzer: Ultimate charisma with the drive for high performance.

Charisma – some have it, others have to work for it but will never achieve it. There's no doubt to which group the MINI Cooper S Clubman belongs even in standard form. An ideal basis for giving a decisive boost to the drive for higher top performance.

With striking aerodynamic components, height-adjustable racing suspension, the proven performance upgrade, a twin

sports rear silencer and 18" wheels in Bicolor design, AC Schnitzer takes the Cooper S Clubman to the threshold of motorsport. As would only be expected from this embodiment of charisma, it provides superb control in every driving situation while retaining the everyday comfort levels of the standard vehicle.

A classic in racing trim: MINI Cooper S Clubman by AC Schnitzer combines refined motorsport engineering with everyday comfort levels and unique elegance.

The measure of all things: Suspension by AC Schnitzer.

What's the good of the best engine performance if it can't be transferred optimally to the road? To meet this challenge, the AC Schnitzer engineers led by „suspension guru“ Manfred Wollgarten, already have several ideal solutions to hand.

The AC Schnitzer suspension spring kit combines lowering by around 25 mm with a more dynamic driving behaviour and unchanged comfort. As the ultimate variant, the height-adjustable AC Schnitzer racing suspension will give all MINI models a special kick.

With a choice of AC Schnitzer wheels Mi1 and Mi2, the right wheel and tyre combination for the MINI family can be selected in individual design and colour variants.

The aluminium AC Schnitzer strut brace is a visual highlight under the bonnet. The AC Schnitzer racing suspension is the result of extensive testing, including on the Nürburgring.

AC Schnitzer alloy wheels Mi2 in Bicolor design available in 7.5 J x 18" (large picture). The AC Schnitzer alloy wheels Mi1 allow a combination of individually painted central star with a polished rim (small pictures).

The Nürburgring – known to motorsport enthusiasts as the „Green Hell“ – is also AC Schnitzer's test track.

AC Schnitzer Design components: Authentic Motorsport feeling from the track to the cockpit.

Exclusive Design components from AC Schnitzer clearly reveal their motorsport heritage in all MINI models – both outside and in. The striking design language of the alloy wheels is reflected in all details in the interior: handbrake handle, aluminium pedal set and gear knob pick

up the bicolor theme in brushed aluminium and black paint. AC Schnitzer velours foot mats complete the exclusive ambience. The AC Schnitzer gear knob with digital gear display is a real technical highlight.
